Third-year Computer Science student at the University of Nottingham with a keen interest in game theory, machine learning, quantitative trading strategies and factor mining. Demonstrated strong research and programming skills through a research project on opponent screening in the Iterated Prisoner's Dilemma, and through achievements including Gold in the WorldQuant BRAIN factor-mining competition.

Education

BSc Computer Science, University of Nottingham **Sep 2024 – Jun 2028 (expected)**

Experience

Research Project: Opponent Screening in the Iterated Prisoner's Dilemma **Jul 2026**

- Designed and implemented a trigger–probe–classify decision template in Python using the Axelrod tournament library, enabling an agent to screen opponents online and adapt as the match unfolds.
- Evaluated the template against all 244 strategies of Axelrod 4.14.0 (200 turns × 3 matches per opponent) and benchmarked against trained evolutionary and learning-based baselines, remaining competitive despite a much simpler design.
- Extended the template with sequential-test upgrades that closed classification blind spots, raising the full-library mean score from 2.845 to 2.913 without weakening retaliatory performance.
- Authored a research paper documenting the template, evaluation protocol and resulting findings.

Summer Intern, Founder Securities **Jul 2025**

- Studied financial-market fundamentals and gained first-hand insight into how securities markets operate during a one-month internship at a brokerage branch.
- Conducted industry research and market analysis, broadening financial-market knowledge.

Achievements

- Achieved Gold in the WorldQuant BRAIN factor-mining competition (Sep 2026), designing and submitting predictive alpha factors.
- Placed 61st of 371 teams at the 2026 ICPC UK & Ireland Programming Contest, solving five of thirteen problems as a core team member.
- Took first place in the university programming contest for three consecutive years.
- Secured a provincial Second Prize in the Lanqiao Cup national programming competition.
- Earned a provincial prize in the Eastmoney Cup university stock-trading competition.
- Competed in IEEEXtreme and the Bloomberg trading challenge.
- During middle and high school: CSP-J Second Prize; CSP-S and NOIP 2021 Third Prizes.

Technical Skills

- Python (PyTorch for deep learning; data analysis and simulation)
- C++ and Java
- LaTeX for research-paper typesetting

Interests

- Play and follow Texas Hold'em poker, with a particular interest in the probabilistic and game-theoretic aspects of decision-making under uncertainty.
- Follow financial markets and quantitative investing, including factor mining and systematic trading.
